Summary

A motivated, results-oriented Computer Science and Computer Information system professional with web design, Computer Hardware repair and software development experience in diversified environment.

Experience

Systems Programming Analyst
UPS

Jun 2019 - Present (1 year 2 months +)
About this role:
Manage Storage Management for UPS. Areas include Storage Area Network (SAN), Network Attached Storage (NAS) and Backup Infrastructure.

As a Systems Programming Associate in UPS I performs testing and operational maintenance to protect and support UPS's Information Services' (I.S.) assets (e.g., mainframe, midrange, open systems and x86 architectures, mobile and fixed devices, etc.). I supports operating systems and related technologies and solutions. I assists with testing, installation, and configuration of third-party infrastructures and applications (i.e., operating system, back-up recovery, communications protocols, and identity management services). also I performs tasks (e.g., monitoring, back-up, recovery operations, etc.) to ensure availability. I assists with executing business continuity plans and testing. I also assists with the capacity management and planning of the Open Systems Storage environment, appropriations, inventory and reporting.
